

HASSAN AMINI

SENIOR FULL-STACK DEVELOPER (.NET & REACT)

Tehran, Iran • 09014475623 • hassanaminidev@gmail.com • github.com/hassan95eb

PROFESSIONAL PROFILE

Results-driven Full-Stack Developer with a strong, senior-level frontend foundation and solid, production-grade backend capability. Expert in the modern JavaScript/TypeScript ecosystem — React.js, Next.js, and React Native (Expo) — while also designing and building RESTful APIs and server-side services in ASP.NET Core (C#) with SQL Server, applying clean, maintainable patterns such as Onion Architecture. Skilled at owning features end-to-end — from the database and API layer through to a polished, high-performance UI — and at engineering data-intensive admin dashboards and management panels. Possesses sharp analytical problem-solving abilities, exceptional adaptability, and a meticulous eye for both system architecture and UI/UX quality.

SKILLS & EXPERTISE

Backend & APIs: ASP.NET Core, C#, Entity Framework Core, SQL Server, RESTful API Design, Onion Architecture, Python (Scripting & Automation)

State & Real-Time: Zustand (Persist), TanStack Query (React Query), Redux Toolkit, Pinia, Context API, WebSockets, Socket.IO, Web Workers

Soft Skills: Sharp Problem Solving, Team Leadership, Technical Coordination, Adaptability, Meticulous Attention to Detail

Frontend Frameworks: React.js, Next.js, React Native, Expo, Vue (2 & 3), Nuxt.js, Angular, Electron, JavaScript (ES6+), HTML5, CSS3

UI, Tools & Testing: Tailwind CSS, Bootstrap, Shadcn/UI, MUI, Leaflet (Maps), Sigma.js, D3.js, React Hook Form, Formik, Yup, Git

Languages: English, Persian

PROFESSIONAL EXPERIENCE

Senior Frontend Developer | Parnian Andish Co

July 2024 – Present

- High-Scale Data Optimization:** Researched, designed, and optimized a heavy-duty management panel rendering over 2,000,000 continuous data points using Sigma.js and Graphology.
- Multithreaded Client Architecture:** Implemented Web Workers to offload heavy computation from the main UI thread, ensuring a seamless, stutter-free 60fps experience while using staged chunk-loading to prevent server-side strain.
- Backend Development (ASP.NET Core):** Contributed as a mid-level backend developer, building RESTful APIs, data models, and server-side business logic in ASP.NET Core (C#) with Entity Framework Core and SQL Server to power the management panels; used Python for auxiliary scripting and data-processing tasks.
- System Refactoring & Modernization:** Orchestrated the comprehensive migration of core corporate products from Vue 2 to Vue 3, leveraging modular composables to reduce codebase complexity and increase reusability.
- State & Network Efficiency:** Integrated Pinia and batched redundant API requests, eliminating reactive overhead, resolving 20% of persistent client-side bugs, and triggering a 40% increase in overall system performance.

Backend Developer (Remote) | Nafasland (nafasland.com)

December 2021 – March 2023

- Inventory Management System:** Independently designed and delivered a custom inventory & warehouse-management system for an e-commerce supplement store, integrating it directly with the storefront's management API on the Portal site-builder platform.
- Clean Backend Architecture:** Engineered the solution in ASP.NET Core (C#) following Onion Architecture, enforcing clear separation of concerns, domain-driven layering, testability, and long-term maintainability.
- Business Features & Optimization:** Delivered core features including advanced product filtering and a best-selling-products reporting module, backed by targeted query- and code-level performance optimizations.

Frontend Developer & Technical Support | Site Saz Portal

October 2021 – December 2022

- Backend Development (ASP.NET Core):** Developed and maintained backend features and RESTful APIs for the site-builder platform using ASP.NET Core (C#), Entity Framework Core, and SQL Server at a mid-level capacity, handling server-side logic and integrations; leveraged Python for supplementary automation tasks.
- Widget & Platform Feature Development:** Built and shipped new widgets and additional platform capabilities for the site-builder, developing their server-side logic, configuration endpoints, and data handling in ASP.NET Core so end users could add and customize them dynamically.
- Performance Transformation:** Revamped core website modules and interactive widgets using Angular, JavaScript, and custom responsive layouts, boosting client performance metrics by 30%.
- Optimized Caching & Bundling:** Established real-time operational communication via WebSockets and drastically reduced initial page load times through Next.js code splitting, dynamic imports, and query caching via TanStack Query.
- Infrastructure & Reliability:** Managed technical infrastructure delivery, resolved intricate domain-routing issues, and standardized site-wide error handling and lazy-loading states.

Frontend Developer Intern | Shahan Gold Company

April 2021 – September 2021

- Developed responsive, customer-facing interfaces for e-commerce and catalog presentation platforms using Vue and Nuxt.js.
- Collaborated closely with UI/UX design teams to implement fluid layouts, while building flexible local state using the Context API.

EDUCATION

Bachelor of Electrical Engineering (Control Systems Orientation)

2013 – 2018

Babol Noshirvani University of Technology (NIT)
