

HASSAN AMINI

SENIOR FULL-STACK DEVELOPER (.NET & REACT)

Tehran, Iran • 09014475623 • hassanaminidev@gmail.com
hassanaminidev.ir • linkedin.com/in/hassanaminidev • github.com/hassan95eb

PROFESSIONAL PROFILE

Senior Full-Stack Developer with a senior-level frontend foundation on top of production-grade backend capability. I design the API and the data model, then build the interface that consumes it — so the seam between them is never where things break. Expert across the modern JavaScript/TypeScript ecosystem (React.js, Next.js, React Native/Expo) while building RESTful APIs and server-side services in ASP.NET Core (C#) with Entity Framework Core and SQL Server, applying clean patterns such as Onion Architecture. Skilled at owning features end-to-end and at engineering data-intensive admin dashboards and management panels.

SKILLS & EXPERTISE

- Backend & APIs:** ASP.NET Core, C#, Entity Framework Core, SQL Server, RESTful API Design, Onion Architecture, Python (Scripting & Automation)
- State & Real-Time:** Zustand (Persist), TanStack Query (React Query), Redux Toolkit, Pinia, WebSockets, Socket.IO, Web Workers
- Soft Skills:** Sharp Problem Solving, Team Leadership, Technical Coordination, Adaptability, Attention to Detail
- Frontend Frameworks:** React.js, Next.js, React Native, Expo, Vue (2 & 3), Nuxt.js, Angular, Electron, TypeScript, JavaScript (ES6+), HTML5, CSS3
- UI, Tools & Testing:** Tailwind CSS, Bootstrap, Shadcn/UI, MUI, Leaflet (Maps), Sigma.js, Graphology, D3.js, React Hook Form, Git
- Languages:** English, Persian

PROFESSIONAL EXPERIENCE

Senior Frontend Developer | Parnian Andish Co July 2024 – Present

Owning frontend architecture for data-intensive management panels, and contributing to the ASP.NET Core services behind them.

- High-Scale Data Optimization:** Researched, designed, and optimized a heavy-duty management panel rendering over 2,000,000 continuous data points using Sigma.js and Graphology.
- Multithreaded Client Architecture:** Implemented Web Workers to offload heavy computation from the main UI thread, ensuring a seamless, stutter-free 60fps experience while using staged chunk-loading to prevent server-side strain.
- Backend Development (ASP.NET Core):** Built RESTful APIs, data models, and server-side business logic in ASP.NET Core (C#) with Entity Framework Core and SQL Server to power the management panels; used Python for auxiliary scripting and data processing.
- System Refactoring & Modernization:** Orchestrated the migration of core corporate products from Vue 2 to Vue 3, leveraging modular composables to cut complexity and increase reusability.
- State & Network Efficiency:** Integrated Pinia and batched redundant API requests, eliminating reactive overhead, resolving 20% of persistent client-side bugs, and triggering a 40% increase in overall system performance.

Backend Developer (Remote) | Nafasland (nafasland.com) December 2021 – March 2023

Designed and delivered a custom inventory and warehouse management system for an e-commerce supplement store.

- Inventory Management System:** Independently designed and delivered a custom inventory & warehouse-management system, integrated directly with the storefront's management API on the Portal site-builder platform.
- Clean Backend Architecture:** Engineered the solution in ASP.NET Core (C#) following Onion Architecture, enforcing clear separation of concerns, domain-driven layering, testability, and long-term maintainability.
- Business Features & Optimization:** Delivered advanced product filtering and a best-selling-products reporting module, backed by query- and code-level performance optimizations.

Frontend Developer & Technical Support | Site Saz Portal October 2021 – December 2022

Shipped widgets and platform features across the site-builder, on both sides of the stack.

- Backend & Platform Features (ASP.NET Core):** Built and maintained RESTful APIs, server-side logic, and integrations for the site-builder in ASP.NET Core (C#), Entity Framework Core, and SQL Server — including new widgets with their configuration endpoints and data handling, so end users could add and customize them dynamically; used Python for supplementary automation.
- Performance Transformation:** Revamped core website modules and interactive widgets using Angular, JavaScript, and custom responsive layouts, boosting client performance metrics by 30%.
- Caching, Bundling & Reliability:** Established real-time communication via WebSockets and cut initial load times through Next.js code splitting, dynamic imports, and TanStack Query caching; resolved intricate domain-routing issues and standardized site-wide error and lazy-loading states.

SELECTED PROJECTS

SEO Lens — Chrome Extension github.com/hassan95eb/seo-extension

Bilingual (English/Persian) on-page SEO auditor covering meta tags, headings, image alt text, canonical, Open Graph, schema, and links — scrolling to and outlining the offending element on the page. Scoring model, branded PDF export, tagged Releases.

Vue 3 Ecosystem — Open-Source Library Monorepo github.com/hassan95eb/vue-ecosystem

pnpm + Turborepo monorepo for a family of Vue 3 libraries, led by an enterprise-grade Vue-native data grid and a Persian utilities package; independent semver per package, tsup/Vite build split, and a headless composable / styled component API, RTL by default.

Sandwich Download Manager — Frontend Contributor github.com/sepehrbayat/sandwich-download-manager

Frontend contribution to an open-source Tauri download manager with a Rust core, in JavaScript (ES modules), HTML, and CSS — the settings panel that puts bandwidth limiting in the user's hands.

SafeRide — Frontend & Product Execution Private repo

Web and mobile student-transportation product built with React and an Android app — owned frontend execution and product-flow clarity, with features validated against a live REST API, fully RTL.

EDUCATION

Bachelor of Electrical Engineering (Control Systems) — Babol Noshirvani University of Technology 2013 – 2018
